

CelebrateOne 2018 SNAPSHOT

Infant Mortality

Infant Mortality Rates

Franklin County

23% decrease in the infant mortality rate since 2011 - from 9.6 to 7.5 per 1,000 live births

White*

35% decrease in the infant mortality rate among Whites* since 2011 - from 7.5 to 4.9 deaths per 1,000 live births

Black*

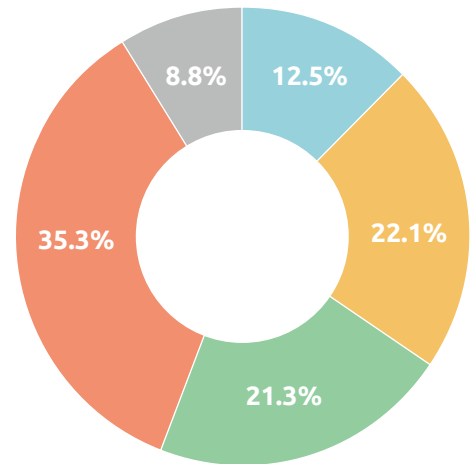

28% decrease in the infant mortality rate among Blacks* since 2011 - from 17.1 to 12.3 deaths per 1,000 live births

2.5x
Black rates are 2.5 times that of white rates

In 2018, more Franklin County babies lived to celebrate their first birthdays and the infant mortality rate continued to drop across all populations. Infant mortality, or the death of a baby before his or her first birthday, is a key indicator of a community's overall well-being.

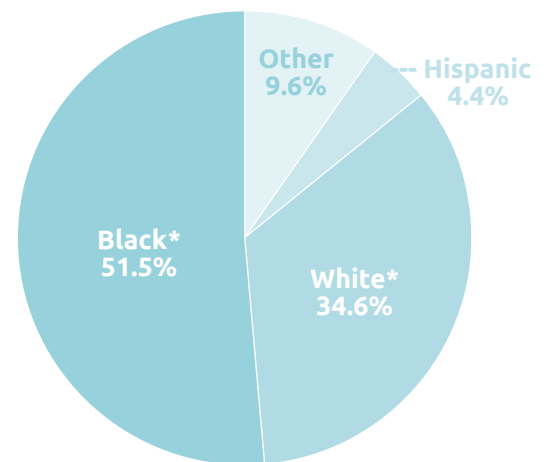

Leading Causes of Infant Deaths in Franklin County*

- Preterm/low birthweight
- Birth defects

2019 Strategies

Expand access to and enrollment in evidence-based home visiting.

Support families from pregnancy through postpartum with home visitors from evidence-based models.

Increase the number of home visiting providers.

Increase neighborhood-based safe sleep ambassador training.

Work with CelebrateOne neighborhood coalitions to conduct safe sleep ambassador training sessions.

Diversify training to include sessions for grandparents and teens/siblings.

Encourage early access to quality prenatal care.

Partner with Smart Columbus to promote calls to StepOne for a Healthy Pregnancy.
