SYPHILIS IS ON THE RISE

There is a syphilis outbreak in Columbus. This quarterly report provides a snapshot of the most up-to-date data on early syphilis cases in Franklin County, Ohio.

Increasing Local Rates: There has been a steady increase in the number of infections over the past 5 years in Franklin County. Overall, local rates are 3 times higher than Ohio and 2 times higher than the U.S.

Disparities: Syphilis rates in Franklin County are disproportionately high in males (vs. females) and blacks (vs. whites).

Testing & Treatment: Syphilis is a sexually transmitted infection (STI) that can have very serious complications when left untreated. Syphilis can be transmitted even if there are no visible signs of infection. The only way to know for sure if you have syphilis is to get tested. Syphilis is easy to diagnose and cure if you get tested and find it early.

For more information on syphilis, including local testing site details, visit www.columbus.gov/Syphilis.
