DRUG OVERDOSE EPIDEMIC

Central Ohio is experiencing a drug epidemic. This quarterly report provides a snapshot of the most up-to-date data on drug overdose treatment and infectious disease in Franklin County.

HARM REDUCTION PROGRAM

Columbus Public Health, in collaboration with other community partners, has launched a comprehensive Harm Reduction Program to lessen the impact of addiction to heroin and other opiates. This partnership is working to save lives, help people recover, and stop the spread of disease through drug abuse prevention education, counseling, testing, and access to syringes and naloxone. These efforts are expected to have many positive impacts such as lowering rates of blood borne diseases like HIV and hepatitis C, keeping used syringes off the streets and connecting people in crisis with substance use services. Learn more at www.columbus.gov/harm.

UNINTENTIONAL DRUG OVERDOSE DEATHS

Unintentional drug overdose deaths are on the rise. This section includes data on rates of unintentional overdose deaths in Ohio and Franklin County.

AGE-ADJUSTED DEATH RATE FROM UNINTENTIONAL DRUG OVERDOSE BY YEAR, 2013-2017

In Franklin County, there was a 584% increase in residents who died from unintentional drug overdoses from 2003 to 2017.

Over 400 Franklin County residents died from unintentional drug overdoses in 2017, surpassing the number of deaths in 2016.
TREATMENT BY EMERGENCY MEDICAL SERVICES (EMS)*
This section includes data of patients treated by Columbus City EMS for suspected drug poisoning/drug ingestion.

*Beginning in Quarter 1, 2017 data were received from Columbus Division of Fire.

ABOUT THE DATA: All preliminary figures are subject to change as new/updated information is received. All data are received by facility location with the exception of hepatitis data, which is received by county of residence. Mortality Data are downloaded from the Ohio Public Health Data Warehouse. Columbus Fire EMS data were received from Columbus Division of Fire. Data is reflective of EMS patients who received at least one dose of naloxone. Current and preliminary hospital emergency department data were downloaded from Ohio’s syndromic surveillance system (EpiCenter). Data includes patients who presented in emergency departments and select acute-care facilities for drug-related complaints that mention overdose. Visits for withdrawal, detox or overdoses due to certain medications such as insulin were removed where identified. Neonatal Abstinence Syndrome data were received from facilities in Franklin County. Data includes Franklin County resident babies with a clinical diagnosis or admitting chief complaint of NAS (ICD10: P96.1). Syringe Access Program data were received from SafePoint. Current and preliminary hepatitis data (2016 and after) are downloaded from the Ohio Disease Reporting System by date of report to CDC. Analysis is completed by the Office of Epidemiology at Columbus Public Health. Only patients with complete data were included in analyses.
