It is important to be prepared for emergencies. Emergencies include natural ones like tornadoes or earthquakes; other types include man-made ones such as biological, chemical, or nuclear emergencies.

**READY IN 3**

We don’t know when an emergency will happen. But there are things we can do to prepare for emergencies of any kind. Preparing now will help protect you and your family in the future. Ready in 3 is an easy way to learn how to prepare for an emergency.

Ready in 3 includes three steps
- Create a plan for you, your family, and your business.
- Prepare a kit for home, car and work.
- Listen for information about what to do and where to go during an actual emergency.

This brochure will help you learn about three types of emergencies: biological, chemical, and nuclear.

**BIOLOGICAL EMERGENCIES**

Bacteria, viruses, and poisons made by bacteria can cause biological emergencies. They can be sprayed into the air or put into food sources or drinking water. They can also be spread by person-to-person contact.

What should I do during a biological emergency?
- Listen to a radio, television, or an emergency alert system for instructions.
- Have a battery-powered radio available, if needed. Officials will tell you whether to stay inside or leave your home. They will tell you where to go if you need to leave your home.

Columbus and Metropolitan Medical Response System
C/O Columbus Health Department
Office of Emergency Preparedness
240 Parsons Avenue
Columbus, Ohio 43215
614-645-7089

The Columbus & Metropolitan Medical Response System is a partnership among Columbus and Franklin County: law enforcement, fire departments, emergency medical services, emergency management agencies, emergency response agencies, public health organizations, hospitals, and other community partners. These groups also work closely with response and planning agencies throughout the State of Ohio.

This brochure will help you learn about three types of emergencies: biological, chemical, and nuclear.
CHEMICAL EMERGENCIES

Chemical emergencies happen when the air is poisoned with harmful chemicals or when chemicals are put into food sources or drinking water. These chemicals can be breathed in or absorbed through the skin.

What should I do during a chemical emergency?
Listen to a radio, television, or an emergency-alert system for instructions. Have a battery-powered radio available, if needed. Officials will tell you whether to stay inside or leave your home. They will tell you where to go if you need to leave your home. You may be told to stay at home and:

♦ Turn off all ventilation systems. This includes furnaces, air conditioners, vents, and fans.
♦ Stay in an inside room with no windows. Make sure there is enough space for everyone in the room.
♦ If instructed, seal the room openings with heavy-duty tape and plastic sheets. Room openings include doors and all vents.

What should I do after a chemical emergency?
Continue to listen to the radio, television, or emergency-alert system for instructions.

NUCLEAR OR RADIATION EMERGENCES

People are exposed to very small amounts of radiation every day. Nuclear or radiation emergencies could expose people to large amounts of radiation, depending on the type of emergency.

A radiation emergency could include a nuclear power plant accident, the explosion of a small nuclear device, or a dirty bomb. A dirty bomb is an explosive, like dynamite, that contains radioactive materials.

What should I do during a radiation emergency?
Officials will monitor the amount of radiation and decide what to do. Listen to a radio, television, or an emergency-alert system for instructions. Have a battery-powered radio available, if needed. Officials will tell you whether to stay inside or leave your home. You may be told to stay at home and:

♦ Close and lock all doors and windows.
♦ Turn off all ventilation systems. This includes furnaces, air conditioners, vents, and fans.

What should I do after a radiation emergency?
Continue to listen to the radio, television, or emergency-alert system for instructions.

Will a chemical emergency make me sick?
During a chemical emergency, you may have some of these symptoms:

watery eyes
burning feeling on your skin
trouble breathing
 twitching
choking
trouble walking in a straight line
confusion

If you have these symptoms, call your doctor right away. If you have watery eyes and burning skin, you should:

♦ Take off your clothes and put them in a plastic bag.
♦ Wash yourself with soap and water, but do NOT scrub your skin.
♦ Put on clean clothes.
♦ Call your doctor right away.

Will a radiation emergency make me sick?
Dirty bombs probably do not have enough radiation to make you sick. The main danger is the blast. But a large nuclear explosion could make you sick. It can take from several hours to days for any signs to appear. Some people have no symptoms. Others have only one or two symptoms. Some common symptoms include:

reddening of the skin
feeling sick or throwing up
diarrhea
feeling very tired
headache
sore mouth or bleeding gums

If you feel sick, call your doctor right away.

What should I do after a radiation emergency?
Continue to listen to the radio, television, or emergency-alert system for instructions.

Will a biological emergency make me sick?
You may not know right away if you were exposed to the germs or poisons that caused the emergency. Symptoms depend on the type of germ or poison that caused the emergency. Some common signs include trouble breathing and flu-like symptoms. If you feel sick, call your doctor right away. They may tell you to:

♦ Take off your clothes and put them in a plastic bag.
♦ Wash yourself with soap and water.
♦ Put on clean clothes.
