

**Appendix B – CEJST Information**  
**A. CEJST Data for Columbus**

	Total CT's <sup>1</sup>	Total CEJST <sup>2**</sup>	Percentage
All service areas, citywide:	224	98	43.75%
Alum Creek Station Service Area	79	48	60.76%
Georgesville Station Service Area	65	18	27.69%
Morse Station Service Area	88	35	39.77%

---

<sup>1</sup> (a) The total number of census tracts within each geography is approximate because the corporate boundary does not always coincide with the census tract boundaries, and care has been taken to try and include only those census tracts that are more than just tangentially within the corporate limits; and (b) the districts overlap some census tracts, which is why the total number of census tracts citywide total is less than the total number of census tracts when adding the census tracts within each service area together.

<sup>2</sup> Additional CEJUST mapping and documentation is provided in this appendix.

## B. CEJST webmap<sup>3</sup>

**How to use the map:**

Zoom in + , search 🔍 , or locate yourself 📍 and select to see information about any census tract.

**Things to know:**

The tool uses census tracts 🗺️ . Census tracts are a small unit of geography. They generally have populations 🧑 of between 1,200 - 8,000 people.

Communities that are disadvantaged live in tracts that experience burdens. These tracts are highlighted 🟦 on the map.

The tool ranks most of the burdens using percentiles 📊 . Percentiles show how much burden each tract experiences when compared to other tracts.

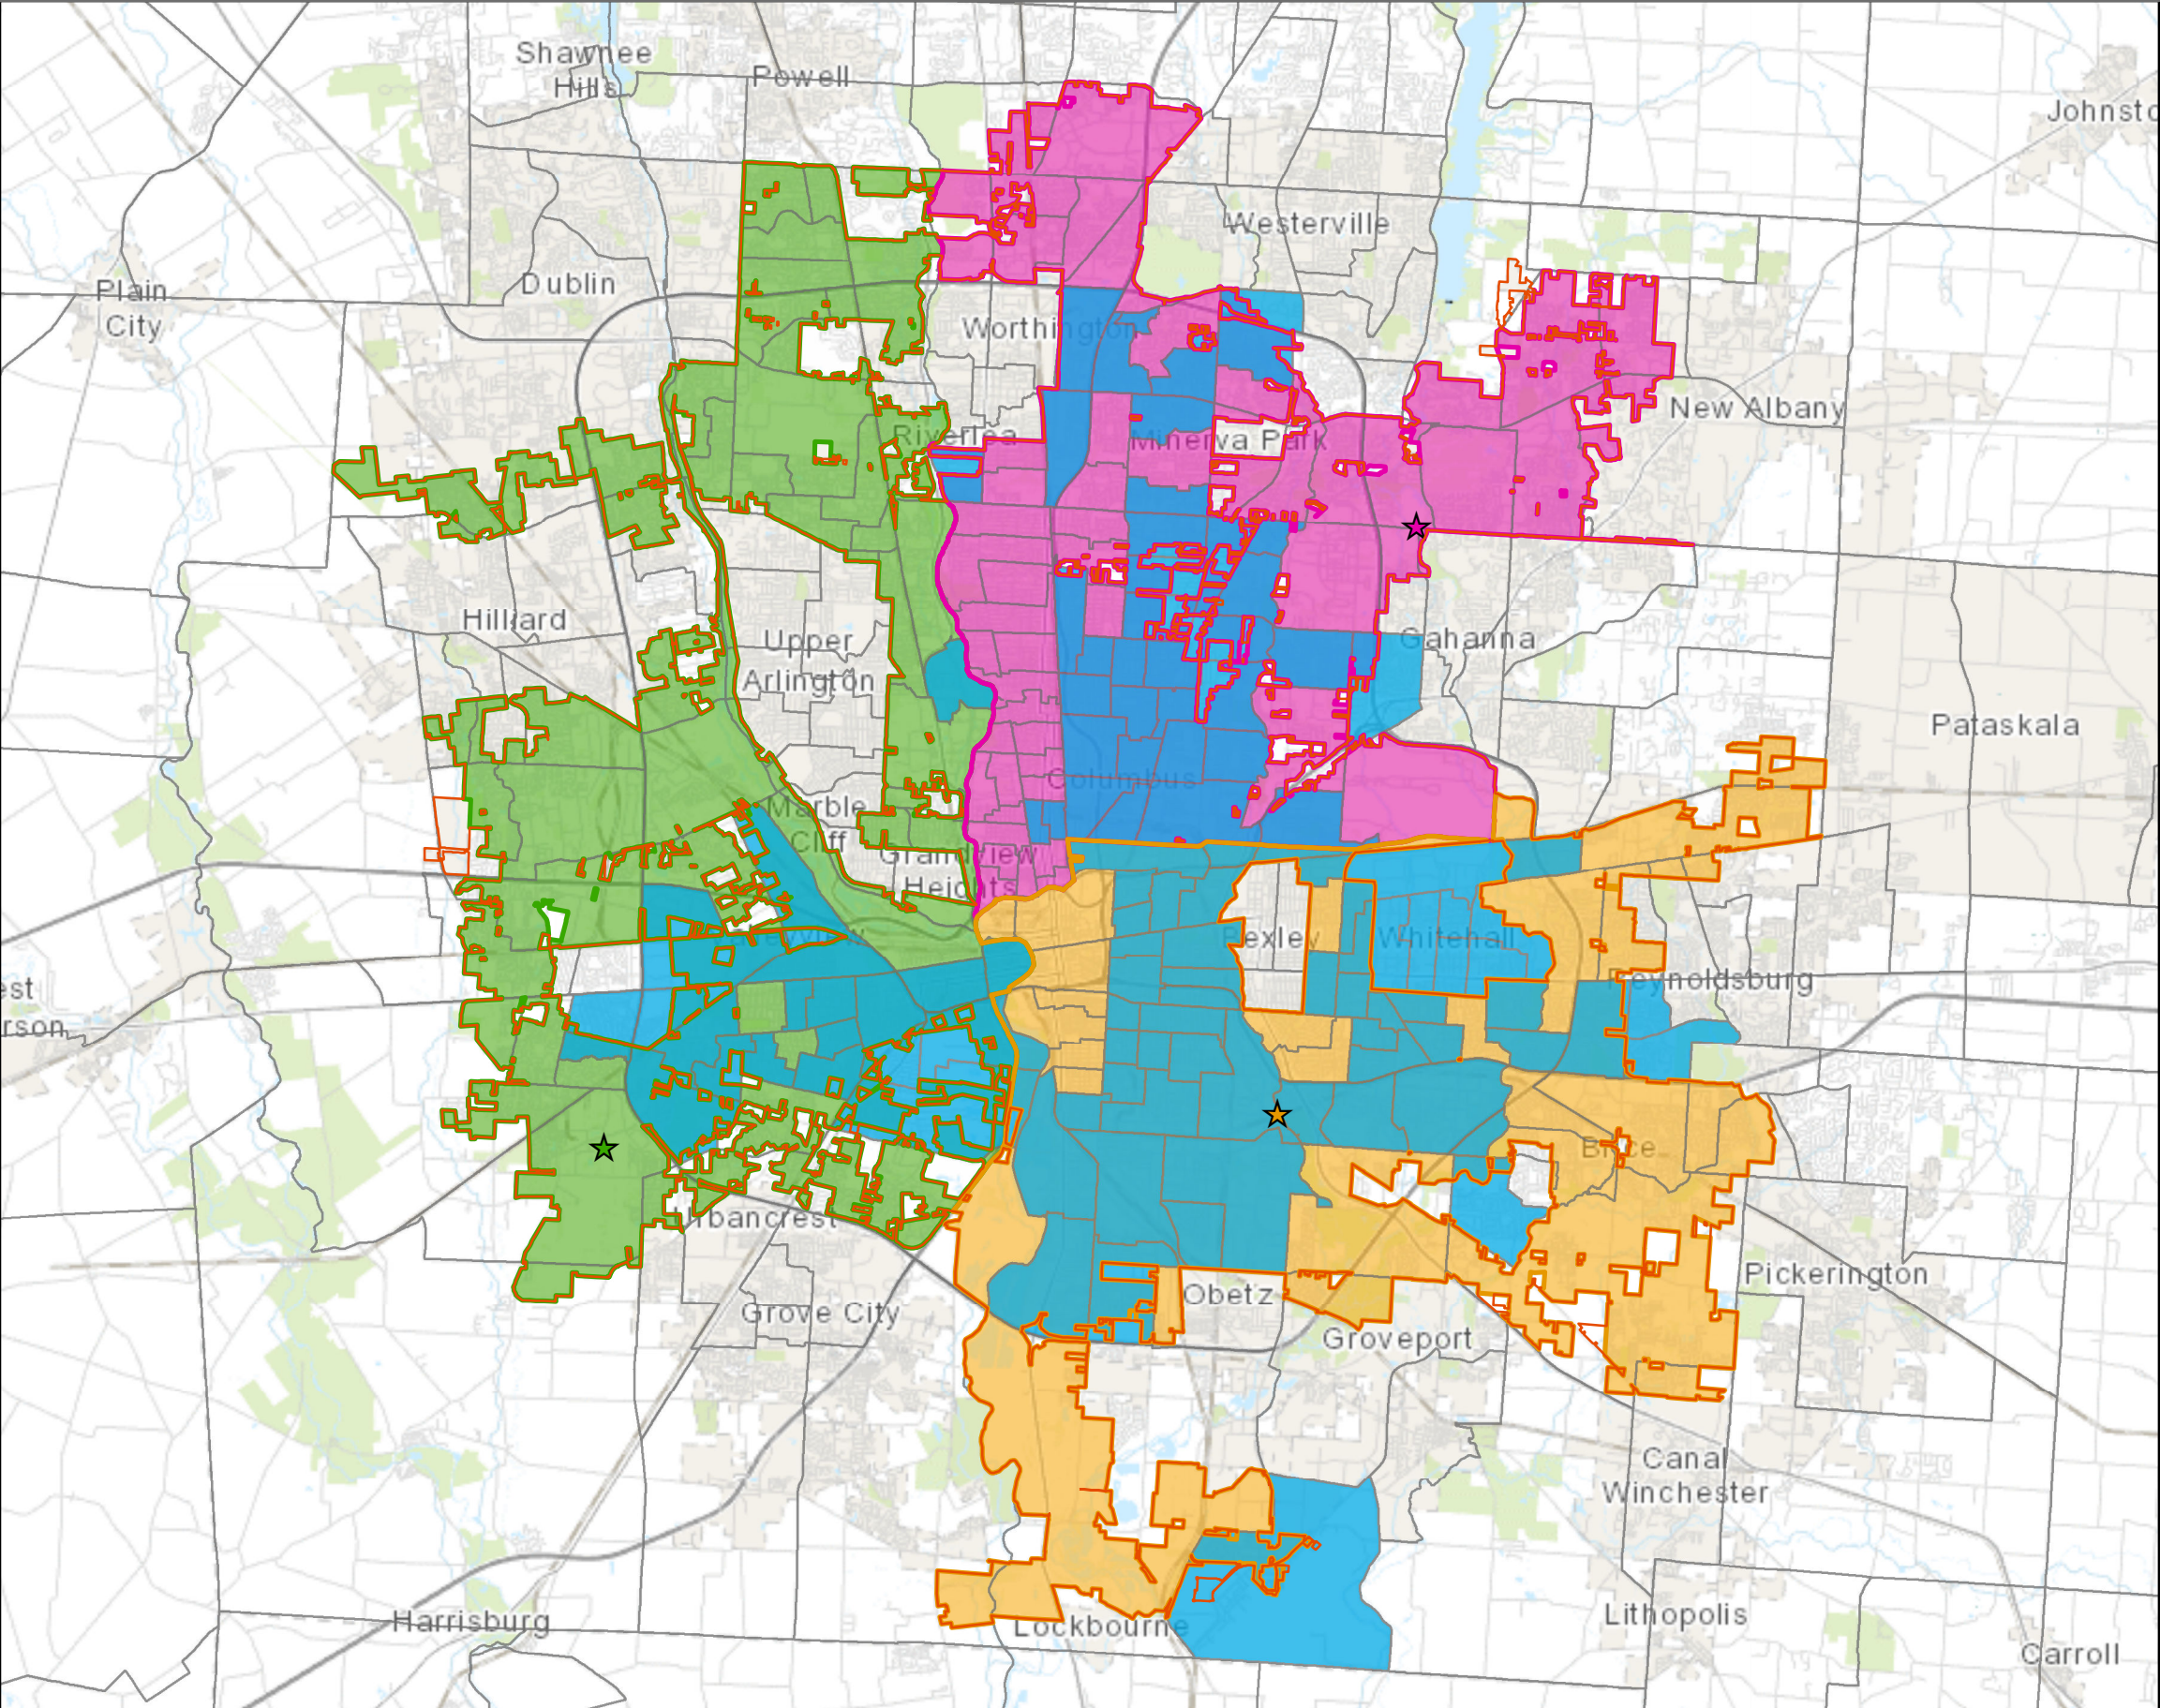

Thresholds 📏 , or cutoffs, are used to determine if communities in a tract are disadvantaged. Certain burdens use percentages 📊 or a simple yes/no ✓ .
