

Watershed Transfer Memo

Date: Monday, May 13, 2024

Project: John Glenn Columbus International Airport New Midfield Terminal

To: Mr. Greg Fedner

Subject: Mason Run Watershed Transfer

Introduction

The current terminal at John Glenn International Airport (CMH) opened on September 21, 1958. The age of the existing facility and related infrastructure, combined with a current terminal capacity of 10 million annual passengers and the need to prepare for the future, necessitates construction of a new terminal at CMH.

Watershed Transfer Analysis

The new terminal location, which was analyzed and approved through an Environmental Assessment, will be located within the Mason Run and Turkey Run watersheds. It is not feasible to maintain the existing watershed boundaries because of the grading required for the New Midfield Terminal and the surrounding apron pavement. As a result of this, a portion of the Mason Run watershed will be transferred to the Turkey Run watershed. The impacted area is 106-acres.

New stormwater controls will be installed as a part of the overall project. These controls will reduce the flow rates of stormwater leaving the airport. As shown in Table 1, the estimated peak flow rates of rainwater runoff in both the Mason Run and Turkey Run watersheds will be reduced because of the new rainwater controls installed with the New Midfield Terminal. Both watersheds will have their 100-year storm event below the pre-development levels for a 10-year storm event at the downstream release point from the proposed stormwater management facilities.

Table 1: Estimated Peak flow due to 100-year and 10-year storm events

Storm Event	Turkey Run		Mason Run	
	Pre-construction	Post-construction	Pre-construction	Post-construction
	cubic feet per second			
10-year	255	180	219	144
100-year	235	209	232	186

As part of the planning study for the new terminal, an Environmental Assessment was conducted in accordance with federal and state standards and regulations to determine the proposed location of the new passenger terminal.

The new terminal location that was determined by that study is located within the Mason Run and Turkey Run watersheds. It is not feasible to maintain the existing watershed boundaries because of the grading required for the New Midfield Terminal and surrounding apron pavement. As a result, a portion of the Mason Run watershed will be transferred to the Turkey Run watershed. The impacted area is 106 acres.

Table 2 lists pre- and post-tributary watersheds and corresponding impervious surfaces for each condition.

Table 2: Watershed Area Summary for Areas Affected by New Midfield Terminal Development

Impacted Watershed*	Pre-Construction area		Post-Construction area		Notes
	Total area	Pavement area	Total area	Pavement area	
	acres	acres	acres	acres	
Mason Run	142	90	36	33	Flow to be controlled by the proposed Midfield Terminal Mason Run Detention
Turkey Run	54	19	160	136	Flow controlled by the proposed Midfield Terminal Turkey Run Detention.
Total	196	144	196	174	

Stormwater Management Facilities

The City of Columbus has specific requirements that guide the impacts of stormwater drainage. The airport must comply with these requirements as it considers the design and infrastructure of the new passenger terminal.

The airport has a variety of control structures to manage stormwater drainage, including detention basins that provide long-term treatment of stormwater.

Table 3 lists pre- and post-detention basins and their corresponding sizes.

Table 3: Stormwater Management Basins serving Stormwater Drainage for CMH airport for Pre- and Post-Construction

Basin ID	Pre-Construction Volume (acre-feet)	Post-Construction Volume (acre-feet)	Notes
Turkey Run Detention Basin	107	107	Existing basin
*CONRAC facility Basin	9.7	9.7	Existing basin
Midfield Terminal Turkey Run Basin	Does not exist before construction	31.8	Proposed basin
Midfield Terminal Mason Run Basin	Does not exist before construction	8.4	Proposed basin
Big Walnut Basin	Does not exist before construction	6.8	Proposed basin
Red Lot Underground storage	14.5	14.5	Existing Basin

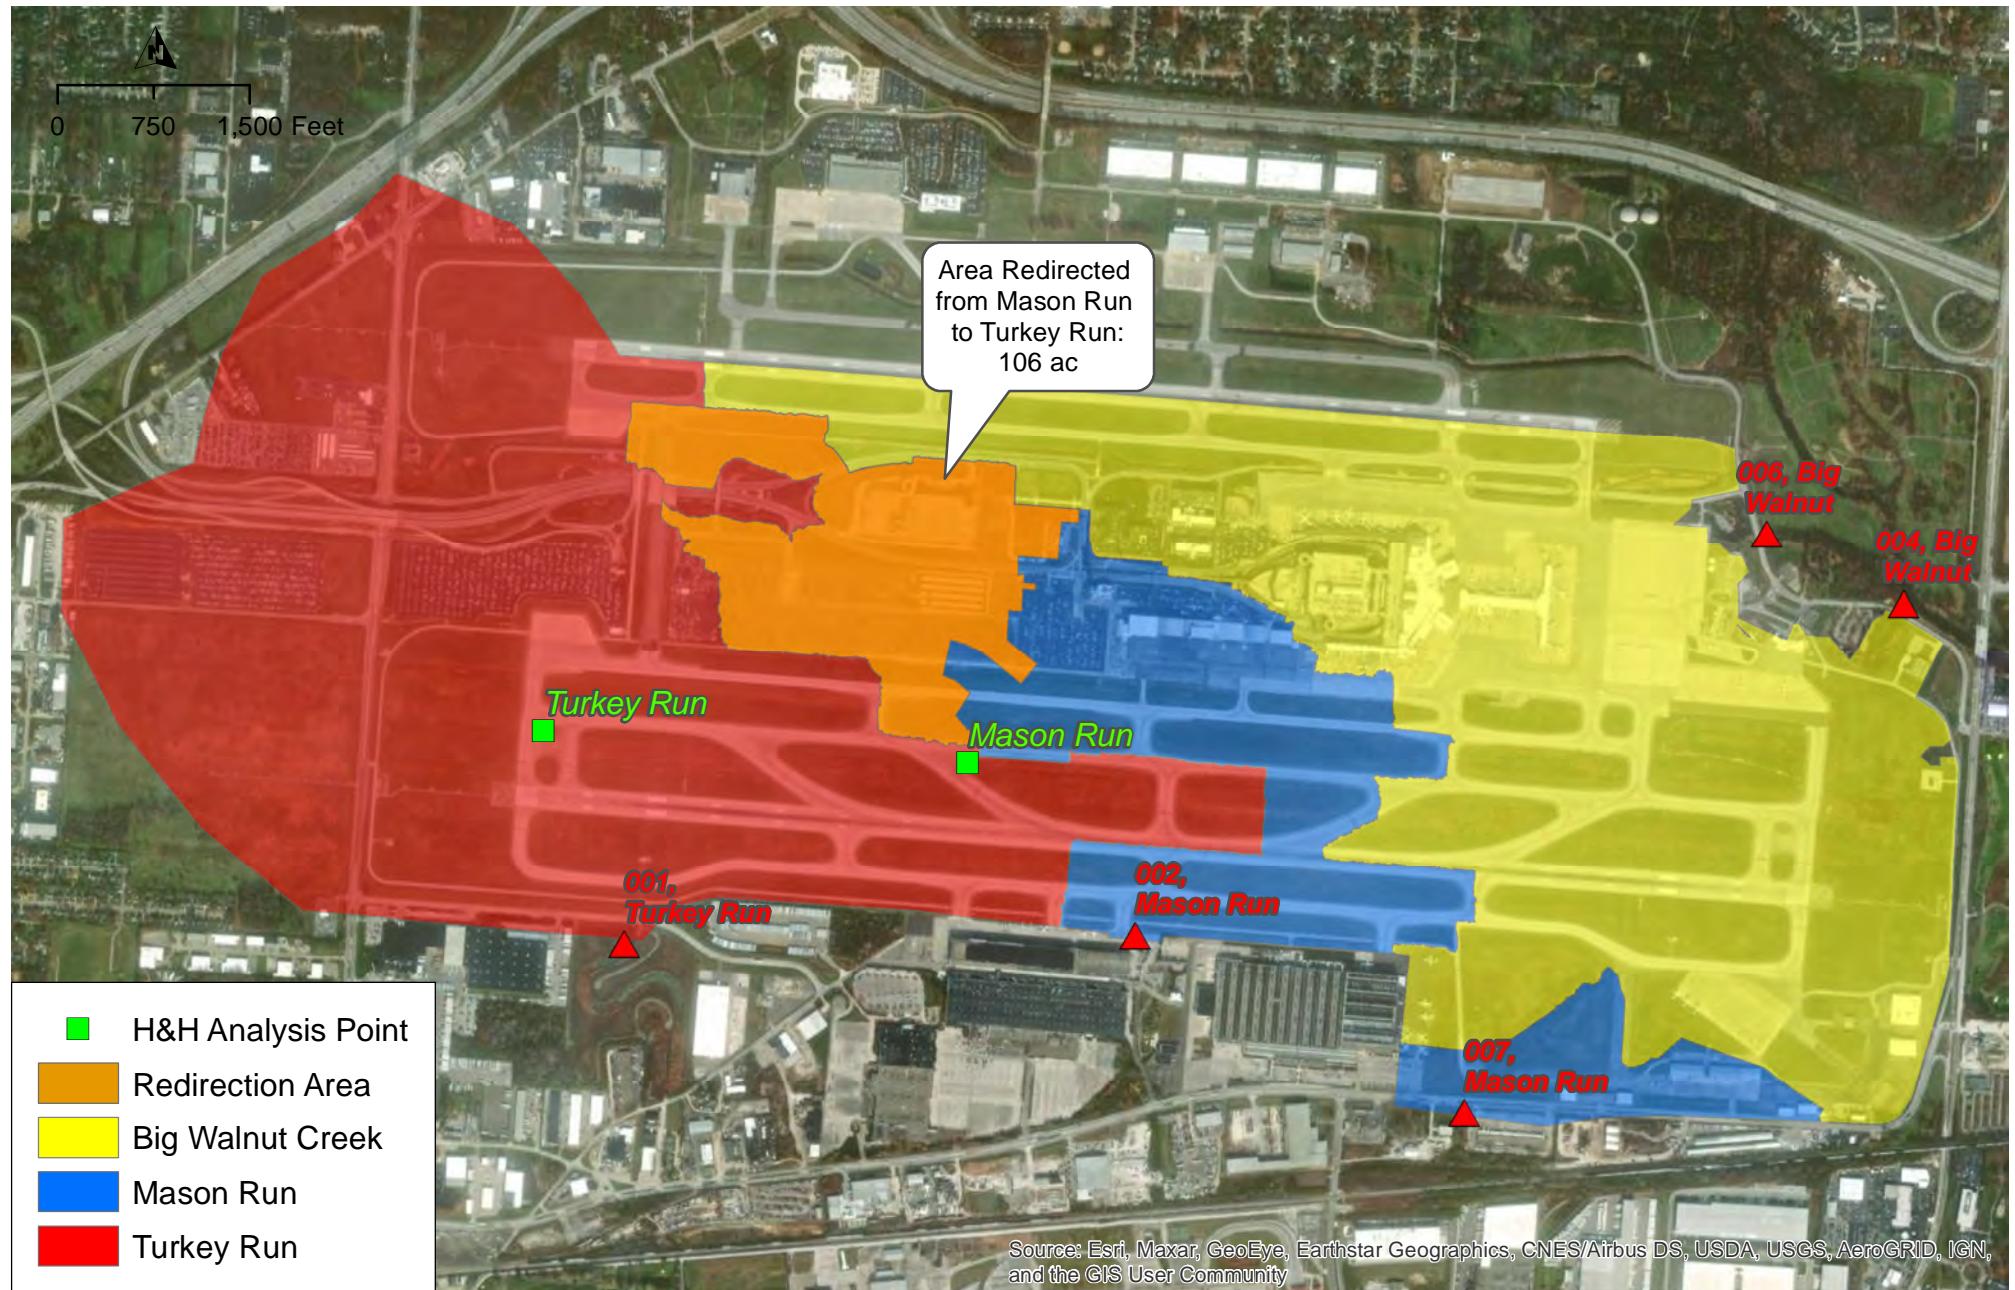

* CONRAC: Consolidated Rental Car Facility

Stormwater Management Benefits

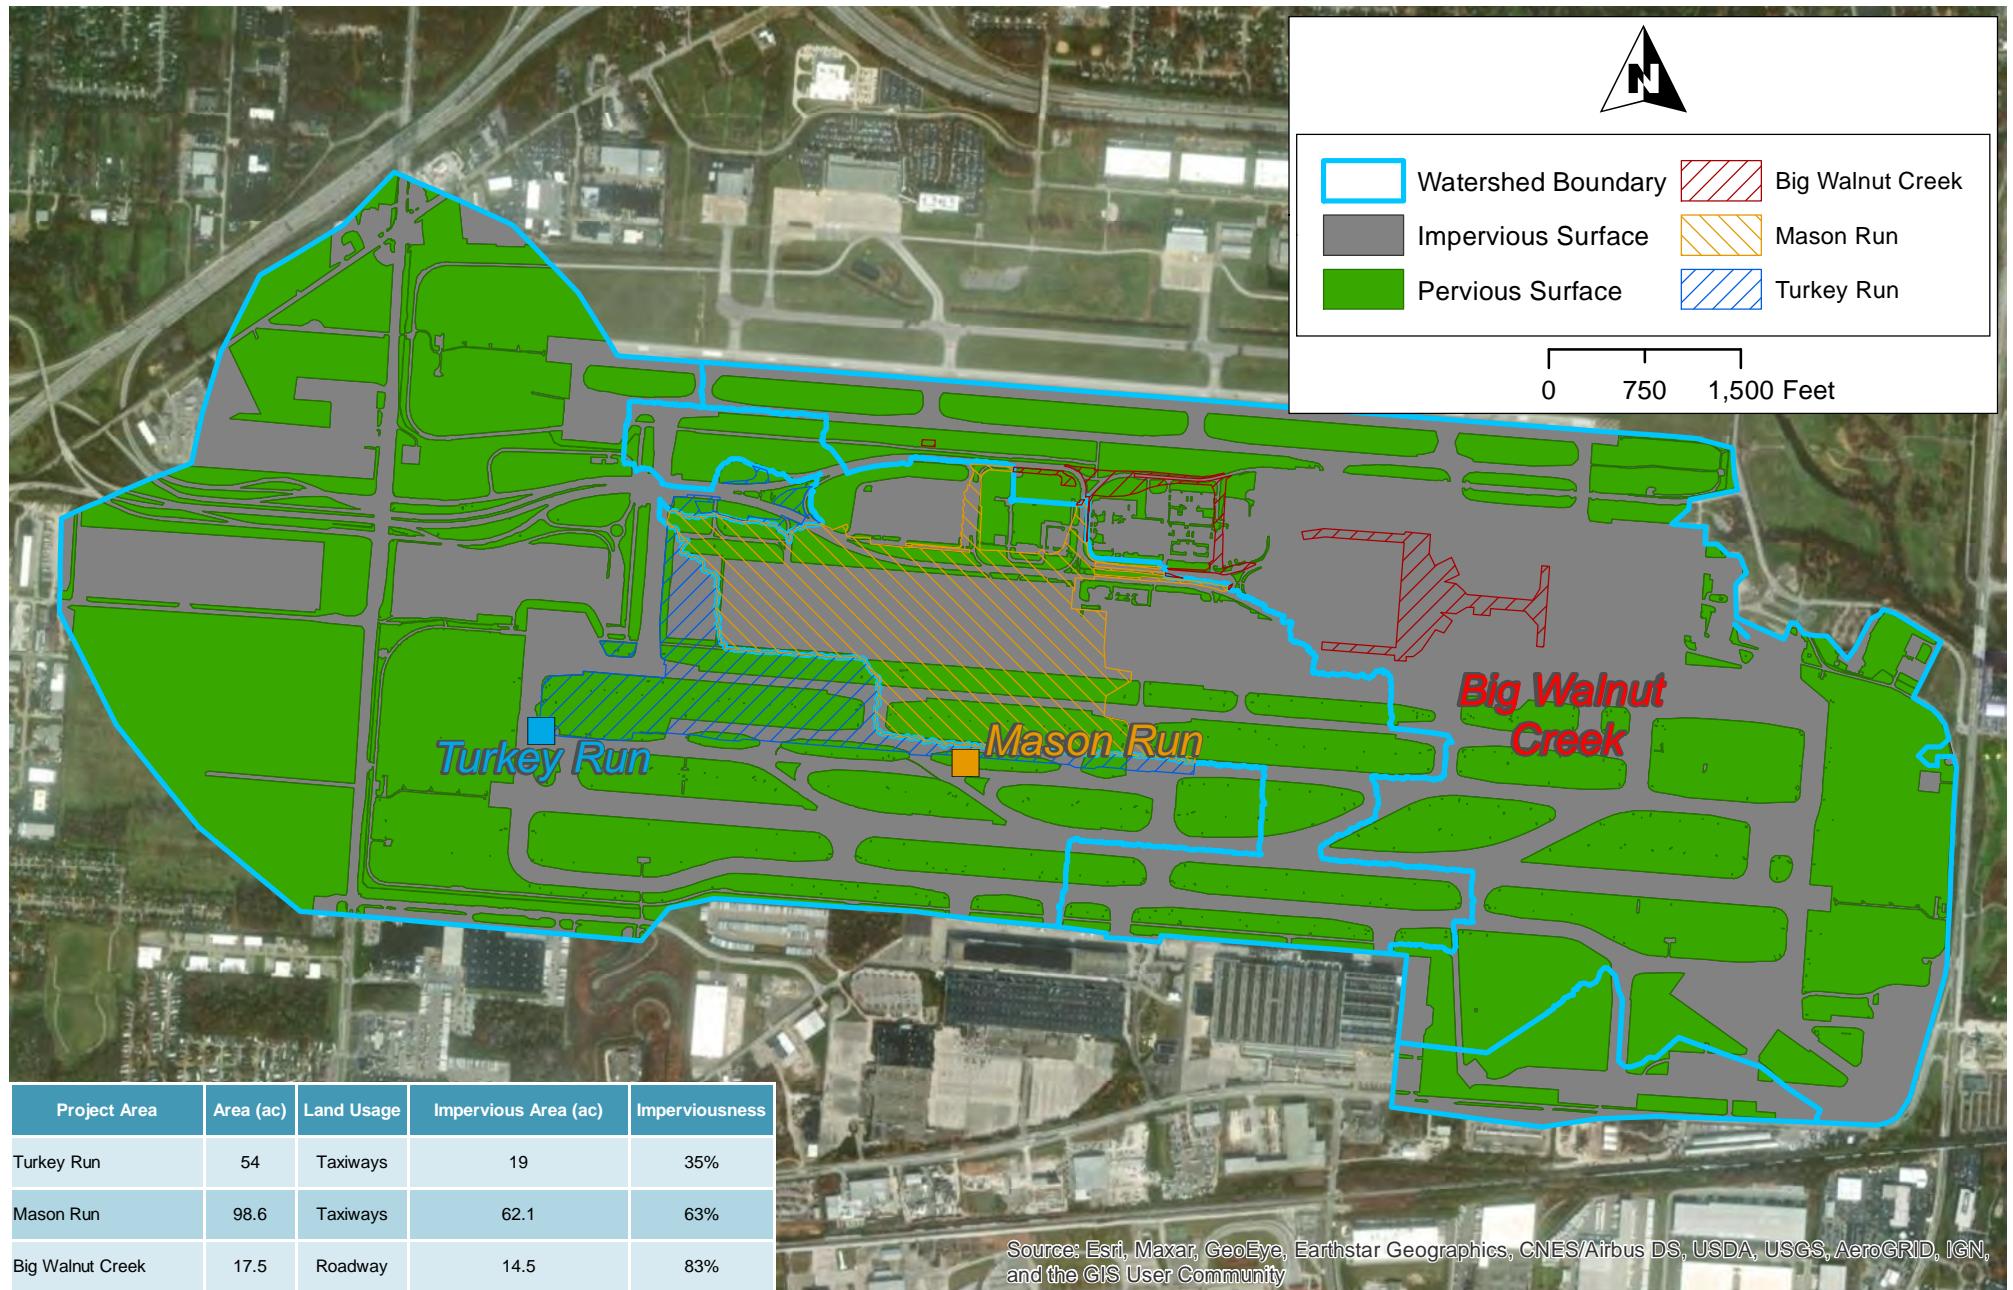

The relocation of the drainage pipe and the changes to the Mason Run and Turkey Run watersheds will provide multiple benefits to both watersheds, specifically:

- Reduced velocity of runoff in both watersheds;
- Reduced degradation of downstream channels in both watersheds;
- Reduced impervious surfaces in the Mason Run watershed;
- Reduced tributary flow in both watersheds;
- New stormwater detention basins to store more rainwater runoff on the airport; and
- Improved water quality in both watersheds.

Hydraulic Analysis Report

Project Data

Project Title: CMH Midfield Terminal: Turkey Run Analysis

Designer: ARG

Project Date: Wednesday, February 7, 2024

Project Units: U.S. Customary Units

Notes: Hydraulic Toolbox 5.2

Channel Analysis: 2 Yr Existing

Notes:

Input Parameters

Channel Type: Trapezoidal

Side Slope 1 (Z1): 2.0000 ft/ft

Side Slope 2 (Z2): 2.0000 ft/ft

Channel Width 8.00 ft

Longitudinal Slope: 0.0010 ft/ft

Manning's n: 0.0700

Flow 601.8000 cfs

Result Parameters

Depth 10.2224 ft

Area of Flow 290.7745 ft²

Wetted Perimeter 53.7160 ft

Hydraulic Radius 5.4132 ft

Average Velocity 2.0696 ft/s

Top Width 48.8896 ft

Froude Number: 0.1496

Critical Depth 4.0307 ft

Critical Velocity 9.2959 ft/s

Critical Slope: 0.0569 ft/ft

Critical Top Width 24.12 ft

Calculated Max Shear Stress 0.6379 lb/ft²

Calculated Avg Shear Stress 0.3378 lb/ft²

Channel Analysis: 2 Yr Existing Basin

Notes:

Channel Type: Trapezoidal
Side Slope 1 (Z1): 2.0000 ft/ft
Side Slope 2 (Z2): 2.0000 ft/ft
Channel Width 8.00 ft
Longitudinal Slope: 0.0010 ft/ft
Manning's n: 0.0700
Flow 260.8000 cfs

Result Parameters

Depth 7.0477 ft
Area of Flow 155.7221 ft²
Wetted Perimeter 39.5183 ft
Hydraulic Radius 3.9405 ft
Average Velocity 1.6748 ft/s
Top Width 36.1908 ft
Froude Number: 0.1423
Critical Depth 2.5720 ft
Critical Velocity 7.7147 ft/s
Critical Slope: 0.0634 ft/ft
Critical Top Width 18.29 ft
Calculated Max Shear Stress 0.4398 lb/ft²
Calculated Avg Shear Stress 0.2459 lb/ft²

Mason Run	$0.9 * A * (Rv_1 * 0.2 + (Rv_2 - Rv_1))$	13.27	=	1.106	ac ft
	12	12.0			

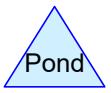

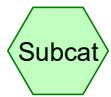

Previously Developed Areas - Ohio EPA encourages the redevelopment of previously graded, paved or built upon sites through a reduction of the WQv treatment requirement. For a previously developed area, one or a combination of the following two conditions shall be met:

- A 20 percent net reduction of the site's volumetric runoff coefficient through impervious area reduction with soil restoration or replacing impervious roof area with green roof area (for these purposes green roofs
