

Heart Disease in the Family Tree Means It's Time to Turn Over a New Leaf.

The tendency to develop heart disease can run in the family, passed down through risk factors such as high blood pressure, high cholesterol, high blood sugar levels and obesity.

Now for the good news: Even with a family history of heart disease, you may prevent it through healthy eating habits and frequent physical activity. And you can pass along those habits to the next generation.

It's time to know about your family's health history. It's time to do more to reduce your own risk against the No. 1 killer of women. It's time to Go Red For Women.

Get started today with these easy steps:

1. Map out your blood relatives' health history using this document as a guide.
2. Talk with your healthcare provider about what this means to you and to your family.
3. Start practicing healthy eating habits and frequent physical activity with your family.

For more information, plus a free red dress pin, visit GoRedForWomen.org or call 1-800-AHA-USA1 or 1-800-242-8721.
