SA004116 - Multiple Hearth Incinerator Improvements

THE CITY BULLETIN
BIDS WANTED - PURCHASING OFFICE AND OTHER DIVISIONS

The City of Columbus, Division of Sewerage and Drainage, operates two large interconnected municipal wastewater treatment plants, a biosolids composting facility, and a Sewer Maintenance Operations Center (SMOC). This work is part of the City's continuing program to upgrade its wastewater treatment facilities, provide efficient, reliable, cost-effective operations, and enhance personnel safety.

The Department of Public Utilities has instituted an Asset Management policy that requires specific information be provided and analyzed before a project can move forward to Detailed Design. To meet these policy requirements a distinct problem statement, multiple alternative solutions, and a benefit to cost ratio must be developed for this project during the Preliminary Design Report phase of the project. The consultant shall incorporate all of the required elements of a BCE into the Final PDR document. The consultant shall attend the Department's BCE training class.

New federal sewage sludge incinerator (SSI) rules for Maximum Achievable Control Technology (MACT) became effective on May 20, 2011 and could be applicable to both WWTFs, as early as September 21, 2013 or as late as March 21, 2016. Although the rules are being contested, the City wishes to evaluate current MACT equipment on the market and prepare a plan for execution if necessary.

The project deliverables shall include a preliminary design report, followed by a biddable detailed design package, and then concluded with technical project representation services during construction.

The City is currently performing minor upgrades to the multiple hearth incinerators and will be conducting stress testing, emission stack testing, and making operational changes to the incinerators over the next 6 months. Once the consultant is under contract, full participation in all incinerator matters is expected, as directed by the City.

The scope of work for the JPWWTP incineration process is expected to be significantly less than for the SWWTP incineration process. In general, the preliminary design for both WWTPs includes five tasks: task 1 will include information gathering, analysis, and the refinement of project goals; task 2 will include an assessment of the incineration process; task 3 will provide a technical and Business Case Evaluation (BCE) integral to the Preliminary Design Report (PDR); task 4 will deliver a Draft Preliminary Design Report and Design Drawings; and task 5 will deliver a final PDR. At a minimum, one workshop and two coordination meetings are required for each of the first four tasks to discuss findings and recommendations with City Staff. The Preliminary Scope of Services Section below contains the details of each task as well as requirements for Detailed Design Services and Services during Construction. The consultant shall assemble an I&C programming team capable of designing, programming, and integrating the I&C system to the City's DOSD I&C standards.
