Proposed river corridor immediately after installation:

- River banks are secured with live branch layering. Wetland areas are defined.
- Immature plants are installed with room to mature.
- Existing vegetation adjacent the river is largely preserved.

Proposed river corridor restoration + 5 years

- Native plants at edge of wetlands have matured creating varieties of textures and seasonal colors.
- Understory shrubs are out-competing cover crops and starting to form mature masses.
- Open water areas are defined and providing wildlife habitat.
- River bank plantings have matured and look natural.

Proposed river corridor restoration + 25 years
